Review Of Systems

After assessing the
patient's symptoms,
the doctor observed
skin problems such as
a rash and itching.
Additional
examination and
procedures may be
required to address
these issues.

Examination

-comedones, small number of inflammatory papules and pustules, and
hyperpigmented macules located on

- symmetrically distributed red plaques with well-defined edges and white
silvery scale located on

Assessment & Plan

Verruca Vulgaris
Management options were discussed, including: cryotherapy, topical exfoliants,
immunomodulators and surgical removal.
Risks and benefits of each reviewed, Patient opted to proceed with the
following treatment:

Procedure

Informed patient about risks and benefits of procedure. Verbal consent taken
from patient. Procedure site cleansed with alcohol. Using a comedone
extractor, open and closed comedone were treated and keratin plugs were
extracted.Patient tolerated procedure well. Instructed to continue acne
medications after 24 hours.
